Destination:

Scheduled date of export:

- The information that I have provided is true, correct and complete in every particular.
- I have checked the identification of the animal(s) for which I am providing this declaration and it is as specified in this declaration.
- I am aware that this declaration is made for the purposes of supporting Shadow Wood in their ability to provide assurance to the buyers that all alpacas have been treated and are in good health prior to departure.

Signature: Date:

Organisation/Farm name (where applicable):

Telephone: Email:

A document listing medications and husbandry for each alpaca will be sent to the new owner after departure from Shadow Wood.

Contact name of new owner..... Their email

Shadow Wood Farm Biosecurity for Arrival and Exit

- **Note: All alpacas will be drenched on arrival** at Shadow Wood in order to enter the export group. This includes pregnant females and cria. In some cases due to the gestation period in pregnant females some products should not be used however substitute products are available hence we require the LMD declaration on this form.
- On arrival the alpaca/s will stay in quarantine paddocks. Our standard 3 day arrival protocol is – First day - weight and health checks, long acting drench (usually Genesis Ultra or Zolvix Plus). Second Day - Baycox C. Transfer to standard (isolation) pasture at the end of the third day.
- Our exit drench protocol is approximately 7 days before departure the alpacas will be drenched again (G.U. and Baycox C, with 24 hours between these two medications).

Shadow Wood General Husbandry

- High nutritional value supplementary feed is given daily during the 42 day stay.
- Regular weight and health checks are performed. Our regular checks *always* consist of an ID/microchip check, weight, body score and eye membrane colour check.
- AsureQuality will do at least two health inspections plus the required blood and TB tests.
- All alpacas require two permanent forms of identification, one of which must be a microchip. This can be inserted prior to arrival at SW or we can arrange for a veterinarian to insert it here.
- Daily zinc supplementation for Facial Eczema protection will be given from January to April/May (there is no additional charge for this). Please ensure alpacas arriving here over this time have begun eating alpaca pellets containing Zinc for approximately 2 weeks before arrival. We advise starting on 50 grams and increasing to 200 grams per alpaca daily as they get used to the taste.
- Nails will be trimmed as required although we do appreciate trimming to be done before arrival here.
- ADE plus Catosal will be given during winter or very wet periods as required. Please ensure vaccines are up to date before arrival here although we can give cria doses if required.

Important Reminder

Before the alpaca/s arrive here we strongly recommend that the seller obtains an alpaca health certificate from a veterinarian and that the buyer obtains insurance cover for their alpaca/s. Almost all alpacas arrive at their destination without issue but occasionally something unexpected may occur and insurance cover will provide peace of mind.

Shadow Wood Mission Statement

As owners at Shadow Wood we are here to safely export healthy alpacas from our facility in NZ to destinations around the world.

Why?

Because we love alpacas as much as you do!

How?

We offer friendly service by skilled owners.

We maintain detailed computer records of all alpaca medications and care.

We take farm biosecurity seriously.

Our customers are always treated with respect.

We value open and honest relationships with all our business colleagues (e.g. veterinarians, MPI, AsureQuality, exporters, and customers).
